

Copilot Image Extraction Prompt Card

Copyable prompts for extraction, direct file update, fallback export and controlled release.

Prompt 1 - Extract and record

Analyse the attached Project Nova image or scanned document. Do not infer an unreadable, cropped or ambiguous value.

Return one row per requested field with these columns:

Source file | Page/visual region | Field | Extracted value | Visual evidence | Confidence (High/Medium/Low) | Image quality issue | Evidence status | Verification required

Requested fields:

Request ID; Requester; Business unit; Access type; Environment; Effective date; End date; Cost centre; Licence cost; Approver; Status; Manager approval; Security approval; MFA required; Privileged access.

Rules:

- Use Not confirmed when a value is missing, cropped, blurred, handwritten, ambiguous or only inferred.
- Preserve leading zeros, punctuation, currency, decimal places and date format exactly.
- Explain how each checkbox selection was visually indicated.
- Separate printed facts from handwriting, stamps and signatures.
- Do not treat a stamp or signature as proof of identity or approval scope.
- Do not update an official record.

If file editing is available, write the results directly into the AI Extraction columns of Lab_11_Image_Extraction_Validation_Register.xlsx. Do not change Ground Truth, Human Decision or Verified Business Record.

Prompt 2 - File creation fallback

Create a downloadable CSV or XLSX named Lab_11_AI_Extraction_Result using exactly these headers: Source File, Page or Region, Field, Extracted Value, Visual Evidence, Confidence, Image Quality Issue, Evidence Status, Verification Required.

Do not place narrative before or after the table. Do not guess missing values.

Prompt 3 - Release approved fields

Using only rows where IMAGE Decision = Human approved, update the matching field in the Verified Business Record sheet.

Change only the Approved Value cell for the named field. Preserve every unrelated value and formula. Record source file, reviewer, approval date and previous value in the Audit Log. Do not release any Not confirmed, Proposed, Unsupported or Review required value.

Prompt 4 - Controlled replacement test

Re-run the same extraction using only 10_Project_Nova_Improved_Replacement.png. Compare it with the prior low-resolution result. Report only changed extracted values, confidence or quality issues. Do not modify results from any other source.
