

Lab 7 SharePoint List Setup Guide

Create the Project Aurora source list from the supplied Excel table and prepare it for a Copilot-generated interactive report.

REQUIRED CAPABILITY

You need permission to create a list on the target SharePoint site. Copilot in SharePoint is a preview capability and requires an active Microsoft Copilot license when the preview reaches your tenant.

Before you start

- Download Lab_7_Project_Aurora_SharePoint_Import_Data.xlsx.
- Use an approved workshop SharePoint site. Do not use a production list.
- Confirm that the SharePoint site contains no sensitive customer, employee or production data.
- Keep the separate validation workbook available for control totals.

Create the list from Excel

1	Open the target SharePoint site.	You have permission to add a list.
2	Select New > List.	The Create a list page opens.
3	Select From Excel.	Do not select Blank list.
4	Upload the supplied .xlsx file.	The file name is Project Aurora SharePoint Import Data.
5	Select ProjectRegisterTable.	The preview contains 30 project records and 21 columns, including the synthetic-data classification.
6	Select Next or continue in the import screen.	Column headers and sample values appear.
7	Name the list IT Project Delivery Register.	Use this exact name so the lab prompts work.
8	Choose the target site if Lists asks where to save.	Do not save to My lists for the shared lab.
9	Select Create.	The new SharePoint list opens.

INTERFACE VARIATION

Microsoft Lists and SharePoint visuals roll out gradually. The wording can differ slightly, but the route remains New > List > From Excel.

Verify column types

Column	Expected column type	Notes
Project ID, Project Name, Department, names	Single line of text	Leading zeros or names are preserved.
Stage, RAG Status, Decision Required, Evidence Status	Choice	Choice values match the workbook.
Approved Budget, Forecast Cost, Budget Variance	Currency or Number	Values are numeric, not text.
Schedule Variance Days, risks, issues	Number	Negative and zero values remain valid.
Planned Go-Live, Forecast Go-Live, Last Update Date	Date and time, date only	Dates sort correctly.
Decision Owner	Single line of text	Blank stays blank when no owner is confirmed.

Quality-control records to retain

- IT-003 has a reported budget variance that does not match the calculation.
- IT-006 is Red but says no management decision is required.
- IT-009 has no project manager.
- IT-012 requires a decision but has no decision owner.
- IT-015 is Green despite a 45-day delay.
- IT-018 contains an invalid negative forecast cost.
- IT-021 has a stale update.
- IT-027 has no forecast go-live date.
- IT-029 has a second budget variance mismatch.
- IT-030 has no RAG status and missing evidence.

DO NOT CLEAN THE CASE YET

These issues are deliberate. They test whether Copilot keeps source uncertainty visible. Correcting them during import removes the learning objective.

Confirm Copilot in SharePoint

- Return to the SharePoint site or open the new list.
- Look for the Copilot button in the upper-right area of the SharePoint experience.
- Open Copilot and ask: Summarise the fields in IT Project Delivery Register. Do not create or modify anything.
- If Copilot is missing, ask the trainer to use the demonstration path. Do not manually build replacement HTML.
