

Lab 6 PowerPoint Copilot Prompt Card

From mixed project evidence to a controlled steering committee deck.

CORE RULE

Do not ask Copilot to make the final decision. Ask it to organise verified evidence so the Steering Committee can decide.

1. Presentation contract

Define before creating

I need an eight-slide steering committee presentation. Audience: CIO, Finance Director, Operations Director and Programme Sponsor. Decision required: approve launch, approve conditional launch or delay. Separate confirmed facts from proposals. Show unresolved conflicts. Use Not confirmed when evidence is missing. Do not invent owners, dates, values or decisions. First propose the slide structure and the evidence required for each slide.

2. Evidence register

Do not resolve conflicts

Review the attached Project Northstar files. Create an evidence register with claim or metric, value, effective date, source file, source location, conflict, missing information and confidence. Create a separate contradiction register. Do not select one conflicting value yourself.

3. Create from the verified brief

PowerPoint creation prompt

Create an eight-slide steering committee presentation from the attached Project Northstar Verified Decision Brief. Use the open Northstar corporate template. Preserve its theme and layouts. Follow the required slide structure. Add concise speaker notes with a [Sources] block on every slide. Do not add facts from general knowledge.

4. Audit before editing

Evidence audit

Audit this presentation against the approved source brief. For every claim, number, date or recommendation, list slide number, supporting source, support status, conflict and required correction. Flag invented numbers, unsupported benefits, assumed decisions and missing conditions. Do not modify the presentation.

5. One-field impact check

Change only one parameter

Approved change: Proposed pilot launch date changes from 15 September 2026 to 29 September 2026. Identify every affected slide and speaker-note location. Return exact current text, proposed replacement and reason. Do not modify anything and do not suggest changes to scope, budget, owners, thresholds, risks or recommendation.

6. Controlled application

Apply after approval

Apply only the approved launch-date replacements in the locations I confirm. Replace 15 September 2026 with 29 September 2026. Do not rewrite surrounding sentences, change layouts, change other dates, add explanations or reformat the presentation. Return a change log.

7. Final source check

Completion review

Check every slide and speaker note against NS-01 to NS-04. Return Pass, Correct or Not confirmed for each slide. Confirm that the old date no longer appears, the new date appears only where relevant and no unrelated content changed.

Where to open Copilot

- 1 Open PowerPoint and the Northstar template.
- 2 Use Copilot on the ribbon or the Copilot button in the lower-right corner.
- 3 For a new deck, select Create presentation from file and choose the Verified Decision Brief.
- 4 For an existing deck, use Add a topic, Add a slide, Rewrite or the Copilot chat pane.
- 5 For speaker notes: View > Notes dropdown > Generate speaker notes for current slide or all slides.

IF A FEATURE IS MISSING

Use the optional PowerPoint Agent in Microsoft 365 Copilot, or create the slide manually from the approved outline. Availability depends on licence, Designer, tenant settings and rollout.
