

Dataset Definitions and KPI Rules

Project Nova Access Requests | Participant reference

CALCULATION RULE

Profile first. Calculate second. Every result must show its denominator, exclusions, definition and approval status.

Field / KPI	Definition	Use	Control
Completion Minutes	Clarification + approval + fulfilment minutes	Directional timing comparison	Exclude negative and blank values
Completion Definition	Provisioning completed OR user access confirmed	Segment; do not merge silently	Committee chooses official definition
Ready-app coverage	Ready-app requests / all dataset rows	Compare technical scope with workload reach	46 / 120 = 38.3%
One-business-day rate	Valid completion <= 480 minutes	Scenario only	Target is Proposed
Processing cost	Synthetic minutes × app rate	Directional estimate	Exclude blank value; not production finance

Required data-quality checks

Check	Expected issue	Treatment
Duplicate ID	NOVA-0067 appears twice	Quarantine pending source-owner confirmation
Negative duration	One approval duration is negative	Exclude from timing KPIs and correct source
Missing completion	One completion value is blank	Exclude from denominator and confirm evidence
Classification mismatch	One privileged request labelled Standard	Do not change without Security approval
Mixed definition	Two completion meanings	Segment or standardise
Missing cost	One cost value blank	Exclude and obtain Finance value

Interpretation warning

VOLUME IS NOT VALUE

The 38.3% ready-app share describes observed request volume. It does not prove the same share of financial value, user impact or risk.

Status vocabulary

Status	Meaning
Confirmed	Directly supported by the authoritative source
Calculated	Derived from supplied data using stated rules
Proposed	Suggested target, option or condition awaiting approval
Not confirmed	Missing, contradictory or unsupported
Approved	Explicitly authorised by the named human decision owner
