

Expected Researcher Report

[Trainer reference](#) | [Project Nova Phase 2](#)

EXAMPLE CONCLUSION

Option A is technically feasible but decision-ready only as a controlled, conditional pilot. The three ready applications cover 46 of 120 requests (38.3%); the committee must decide whether that limited reach is acceptable.

Executive findings

Claim	Source / status	Implication
Three approved integration paths exist.	Options Pack — Confirmed	Subset pilot is feasible
Ready applications represent 38.3% of requests.	Dataset analysis — Calculated	Most observed volume is outside scope
FinanceHub API approval remains open.	Options Pack — Confirmed	Five-app rollout unsupported
Power BI consent and design are unresolved.	Options Pack — Confirmed	Five-app rollout unsupported
One-business-day target.	Decision Brief — Proposed	Cannot be treated as an SLA

Options assessment

Option	Evidence-based view	Researcher recommendation status
A — 3-app pilot	Feasible if limited coverage, KPI definition, controls and exit criteria are accepted.	Working recommendation — human approval required
B — 5-app rollout	Depends on unresolved FinanceHub and Power BI constraints.	Not supported by current evidence
C — Discovery only	Resolves evidence gaps but delays controlled learning.	Feasible fallback

Uncertainties to preserve

- No approved official completion definition.
- No approved one-business-day target.
- No evidence that 38.3% request coverage equals 38.3% business value.
- No evidence that pilot findings generalise to the two unresolved applications.
- No approved ROI calculation.

Questions for the Steering Committee

- Is a four-week pilot with 38.3% request coverage sufficient to learn and decide?
- Which access classifications remain human-approved?
- Which completion definition and pilot target should be approved?

- What evidence must be available before FinanceHub or Power BI joins the scope?
