

Trainer Demo and Answer Key

Lab 10 — Frontier Agents Decision Sprint | Keep private

TRAINER OUTCOME

Participants should discover that agent specialisation improves productivity but not authority. The TRUST handoff and human decision boundary remain necessary.

Demo sequence

Time	Action	Teaching point
0–10 min	Capability check and source hierarchy	Frontier availability varies; method remains usable
10–25 min	Researcher investigates options	Citations and source ranking
25–40 min	Analyst profiles dataset	Quality before KPI
40–50 min	Reconcile conclusions	Technical readiness $\neq$ workload coverage
50–60 min	Complete TRUST handoff	No uncontrolled agent chain
60–75 min	Create Word / PowerPoint output	Direct creation with controlled evidence
75–85 min	Optional Cowork	Stop at approval boundary
85–90 min	Debrief	Human decision and governance

Expected facts

Item	Answer
Total requests	120
Ready applications	ServiceNow, HR Core, GitHub Enterprise
Ready-app volume	46 requests — 38.3%
Not-ready applications	FinanceHub, Power BI Workspace
Not-ready volume	74 requests — 61.7%
Recommended position	Controlled 3-app pilot with explicit conditions
One-day target	Proposed / Not confirmed

Expected data-quality findings

- Duplicate request ID NOVA-0067.
- One negative approval duration.
- One missing completion duration.
- One privileged request labelled Standard.
- Two completion definitions.
- One missing processing cost.

Common unsafe outputs

Unsafe output	Why it fails	Trainer correction
"All five apps are ready."	Contradicts approved constraints	Require source citation and mark unsupported
"The pilot covers the business."	38.3% volume does not prove representative coverage	State denominator and limitation
"SLA is one day."	Target is Proposed	Restore status and decision owner
Raw Researcher text passed to Word Agent	No controlled handoff	Complete TRUST template first
Cowork sends or updates without review	Consequential action bypasses approval	Stop at approval screen

TRUST scoring answer

Dimension	Full-score evidence
Trace	Every material statement names the source, section or calculation.
Rank	Internal approved constraints outrank external or draft claims.
Uncertainty	Mixed definitions, missing data and assumptions are explicit.
Sign-off	Committee, Security, Process Owner and Programme Lead decisions are named.
Transfer	Next agent receives only the reviewed facts, calculations and permitted scope.

Expected management recommendation

RECOMMENDED WORDING

Approve a four-week pilot for ServiceNow, HR Core and GitHub Enterprise only if the committee accepts 38.3% workload coverage and approves the completion definition, pilot measures, privileged-access control and exit criteria. Continue FinanceHub and Power BI remediation in parallel.

Debrief answers

- Different agents can be correct because they answer different questions.
- Citations alone are insufficient if source authority is not ranked.
- The persuasive risk is an agent silently changing Proposed to Approved.
- Direct file creation reduces manual transfer, but it does not remove review.
- A safe Cowork demonstration stops before consequential execution.

Fallback guidance

- No Researcher: use Copilot Chat with only the supplied sources and the same output structure.
- No Analyst: use Copilot in Excel to profile, calculate and create editable charts.
- No Word or PowerPoint agent: use in-app Copilot with the approved TRUST handoff.
- No Cowork: create the approved action plan in Word or Excel and review it manually.
