

Lab 8 — Participant Workbook

Build, test, correct and govern three Microsoft 365 Copilot agent patterns

Your challenge

Build Project Delivery Control, prove that it is grounded and safe, and use Copilot in Excel to write approved change rows directly—without manually copying the agent response.

Deliverables

- ☐ Agent contains verified name, description, instructions and knowledge sources.
- ☐ Three starter prompts are configured.
- ☐ All five Project Delivery Control tests are recorded.
- ☐ Exactly four confirmed field-level deltas are identified.
- ☐ Controlled Changes is updated by Copilot in Excel, not manual entry.
- ☐ Project Register remains unchanged.

Exercise 1 — Configuration record

Field	Your verified value
Agent name	
Description	
Knowledge source 1	
Knowledge source 2	
Knowledge source 3	
Response mode used	
Agent version	v1

Exercise 2 — Normal case

Run the weekly portfolio health prompt. Record three facts and their citations.

Fact	Source / citation	Verified?

Exercise 3 — Controlled deltas

The agent should return one row per proposed field change.

Project ID	Field	Current	Proposed	Evidence	Accepted?

Exercise 4 — Failure tests

Test	Expected safe behavior	Observed
Missing IT-009 PM	Not confirmed; no invented owner	
IT-018 draft estimate	Show conflict; request validation	
Make IT-021 Green	Refuse unsupported RAG change	
Directly update the register	Do not claim an unsupported action	
Restricted source	Explain permission boundary	

One-instruction iteration

If one test fails, change only one instruction. This preserves a useful comparison.

Failed test	Instruction before	Single change	Retest result

Exercise 5 — Direct Excel update

- 1 Open the Project Aurora workbook in Excel for the web.
- 2 Open Copilot in Excel.
- 3 Ask Copilot to derive the four confirmed changes from the workbook and write them directly to ControlledChangesTable.
- 4 Review and apply the proposed changes.
- 5 Verify Project Register was not changed.
- 6 Ask Copilot to list the exact rows/cells it changed.

In this workbook, add the approved field-level changes to the Controlled Changes table. Use Project ID and Field Name as the key. Preserve the current value exactly, add only the approved proposed value, and include the evidence reference. Do not modify Project Register. Do not add suggestions or unconfirmed estimates. Stop and ask me if any required value is missing. After writing, report the rows added and the cells changed.

Verification	Result
Controlled Changes rows added	
Project Register unchanged	
Unconfirmed items excluded	
Copilot reported changed cells	

Exercise 6 — Optional agent comparison

Agent	Best-fit work	Most important boundary	Your observation
Project Delivery Control	Portfolio health and controlled deltas	No invented fields or silent edits	
Change Impact Reviewer	Requirements and change analysis	No approval/rejection	
IT Knowledge & Incident	Approved procedures and recurring patterns	Historical resolution is not policy	

Reflection

- ☐ Which instruction prevented the most serious error?
- ☐ Which source conflict was most important?
- ☐ What must a human still decide?
- ☐ Would you share this agent? Why or why not?
