

Lab 5 Participant Workbook

Build and govern your personal Copilot prompt library.

Duration	Duration	Tools
200	55-70 minutes	Copilot Chat + Excel + Prompt Lab

DELIVERABLE

One prompt tested on two cases, approved as v1.0, recorded in Excel and saved in Prompt Lab without client-specific content.

Files required

- Project Meridian Case Pack.docx
- Project Harbor Case Pack.docx
- Reusable Prompt Builder.docx
- Consultant and BA Prompt Library.xlsx
- Prompt Library Quick Card.pdf

Exercise 1: Select recurring work

Choose a repeated task such as requirements extraction, meeting follow-up, change analysis or executive reporting. Complete section A of the Prompt Builder.

Exercise 2: Run a weak baseline

Weak prompt

Review these notes and create requirements for Project Meridian.

Record why it is weak

- Project-specific
- No authoritative source
- No audience or decision context
- No evidence rule
- No output contract
- No uncertainty handling

Exercise 3: Build the reusable GSCE version

Use placeholders and the Prompt Builder. Keep task logic stable and remove client names and fixed dates.

Builder prompt

Turn the one-off prompt below into a reusable GSCE template. Use placeholders for project, source, audience, purpose, structure and limits. Add source boundaries, evidence requirements and an explicit Not confirmed rule. Do not add a business rule that is not present in the original task.

[PASTE ONE-OFF PROMPT]

Exercise 4: Test Project Meridian

- 1 Reference only the Meridian case pack.
- 2 Complete all placeholders.
- 3 Run the prompt.
- 4 Score the result in Test Log.
- 5 Record every unsupported addition or hidden assumption.

Exercise 5: Test Project Harbor unchanged

Use the same prompt structure. Replace only project, source, audience and purpose placeholders.

FAILURE SIGNAL

Any Meridian supplier, compliance, SAP or regulatory content appearing in the Harbor output proves the prompt is overfitted or the chat context is contaminated.

Exercise 6: Approve v1.0

- Both cases pass source discipline.
- Uncertainty remains visible.
- No owner, date or decision is invented.
- Output structure is stable.
- Manual editing is limited.
- The complete previous draft remains traceable.

Exercise 7: Record it in Excel

- 1 Open Prompt Catalogue and select the prompt row.
- 2 Confirm ID, category, business outcome, application and owner.
- 3 Paste the complete prompt into Prompt Text.
- 4 Record both tests in Test Log.
- 5 Change status to Approved only when the formula result passes.
- 6 Set version v1.0 and last-tested date.

Exercise 8: Find and use the bookmark

THE IMPORTANT LOCATION

Return to the message you wrote in the conversation. The save control appears when you hover over your sent prompt; it is not attached to the Copilot answer.

- 1 Run the final reusable prompt and wait for a complete response.
- 2 Move the pointer over your sent prompt message.
- 3 A compact action row appears beside or below the message.
- 4 Select the outline bookmark icon labelled Save prompt.
- 5 Change the saved title to BA-03 - Requirements Evidence Register.
- 6 Open Prompt Lab below the input box.
- 7 Select Your prompts or Your saved prompts.
- 8 Open the item and verify the placeholders.

IF YOU CANNOT SEE IT

Hover slowly over the prompt; widen the window; check More actions (...); confirm the prompt completed; try Copilot web; or open Prompt Lab directly. Some tenants may not expose the same saving controls.

Exercise 9: Maintain the library

- 1 Create a change request before editing an approved prompt.
- 2 Name the one rule or field being changed.
- 3 Retest both cases.
- 4 Create a new version only after passing.
- 5 Keep the previous version as rollback.
- 6 Retire prompts that duplicate or conflict with a better prompt.

Completion checklist

- Prompt uses GSCE
- All placeholders are obvious
- Two cases tested
- No client data saved
- Excel status Approved
- v1.0 retained
- Prompt visible in Your prompts
