

Lab 5 Prompt Library Quick Card

Build, test, save and maintain reusable prompts for consulting and business analysis.

CORE RULE

Save the reusable structure, not client-specific names, dates, content or links.

GSCE prompt structure

Label	Description
Goal	What should Copilot produce?
Source	Which exact content is authoritative?
Context	Who uses the output and why?
Expectations	Structure, limits, evidence and uncertainty rules.

Reusable requirements prompt

Goal
Review [SOURCE] and prepare a requirements-evidence register for [PROJECT].

Context
The register will be reviewed by [AUDIENCE] to support [PURPOSE OR DECISION].

Source
Use only [APPROVED SOURCE]. Do not use another project or general knowledge.

Expectations
For every item include Requirement ID, statement, type, evidence, stakeholder, acceptance condition, confidence and open question. Separate confirmed requirements, assumptions and recommendations. Do not invent an owner, deadline or decision. Write Not confirmed when evidence is missing.

Where the bookmark is

LOOK AT YOUR PROMPT

The bookmark belongs to the prompt you sent. It is not on the Copilot response and it may remain hidden until you move the pointer over your prompt.

- 1 Open Microsoft 365 Copilot Chat on desktop web or desktop app.
- 2 Send the complete reusable prompt and wait until Copilot finishes responding.
- 3 Move the mouse pointer back to the message containing your prompt.
- 4 Hover over that sent prompt. A small action row appears beside or beneath the prompt message.
- 5 Look for an outline bookmark icon. Its tooltip should say Save prompt.
- 6 Select the bookmark. If requested, change the title to the controlled Prompt ID and name.
- 7 Open Prompt Lab below the message box, then open Your prompts or Your saved prompts.
- 8 Open the saved prompt and confirm its placeholders are still present.

IF THE BOOKMARK IS MISSING

Confirm that the prompt ran successfully; hover over your prompt rather than the answer; widen the window; check More actions (...) if icons are collapsed; try Copilot web; then use Prompt Lab directly. Availability can depend on licence, tenant policy and rollout.

Approval test

- Works on two different cases
- No client leakage
- No unsupported additions
- Missing facts remain visible
- Expected structure is consistent
- Previous approved version is retained
