

Lab 5 Trainer Demo and Answer Key

Private facilitation notes for the personal Copilot prompt-library lab.

KEEP PRIVATE

This file contains model classifications, expected failures and scoring guidance.

Recommended demonstration

- 1 Show the weak one-off prompt.
- 2 Build BA-03 with participants using GSCE.
- 3 Run it on Meridian.
- 4 Open a new chat before Harbor to avoid context leakage.
- 5 Test Harbor by replacing placeholders only.
- 6 Show the bookmark on the sent prompt message.
- 7 Open Prompt Lab and verify the saved item.

Expected Meridian findings

Type	Expected findings
Confirmed requirement	Compliance screening completes before activation.
Confirmed requirement	Banking data receives an independent second check.
System boundary	SAP remains system of record for active suppliers.
Recommendation	Controlled Danish-supplier pilot.
Open question	Retention period, external identity, override owner and duplicate rule.
Action	Martin confirms retention by 12 September.

Expected Harbor findings

Type	Expected findings
Confirmed scope	Intake, classification suggestions and draft acknowledgements.
Human gate	Analyst approves classification before routing.
Excluded	Automatic resets and automatic priority decisions.
Open question	Channel, owner, verification and bilingual approval.
Action	Maya provides ten anonymised examples by 10 September.

Model BA-03 approval criteria

- Goal names the requirements-evidence register.
- Source is explicit and exclusive.
- Context identifies audience and decision.
- Expectations separate confirmed, assumed and recommended items.
- Every item has evidence.
- Missing values become Not confirmed.
- No project-specific nouns remain in the saved template.

Common errors

Issue	Resolution
Saved prompt contains Project Meridian	Replace it with [PROJECT].
Prompt says create all requirements	Require evidence and separate status.
Harbor output mentions SAP	Use a new chat and tighten the source boundary.
Participant saves the answer	Save the sent prompt, not Copilot response.
Bookmark absent	Use hover, More actions, Prompt Lab or web; explain rollout dependency.
One case only	Keep status Tested, not Approved.

Bookmark live-demo script

Say: “Wait until Copilot finishes. Now move back to the message we sent. I am hovering over my own prompt, not over the response. The hidden action row has appeared. This outline bookmark is Save prompt. I will select it, give it the controlled title, and then open Prompt Lab below the message box to check Your prompts.”

DO NOT PROMISE IDENTICAL UI

The location can shift between web, desktop and tenant releases. Teach the visual behaviour: successful sent prompt -> hover -> action row -> bookmark or More actions -> Prompt Lab.

Debrief answers

- A prompt is approved because it performs across contexts, not because it looks sophisticated.
- Prompt Gallery is a quick-access layer; Excel remains the controlled library.
- A shared prompt link is not an approval record.
- New client facts belong in placeholders or referenced sources, never in the reusable template.
- A prompt update requires versioning and retesting.
