

Lab 12 - Trainer Demo and Answer Key

[Expected findings, control answers and facilitation guidance](#)

Trainer demonstration sequence

1. Show the authority hierarchy before opening Copilot.
2. Generate the draft and let participants identify any overclaimed date or scope.
3. Use Edit in Pages and show that the Page is separate from the private chat.
4. Share a Page link or component and perform only the authorized owner correction.
5. Inspect previous versions and demonstrate recovery.
6. Replace v4 with v5 and run the one-change test.
7. Use Create > Document or PDF only after the release gate.

Expected findings

Item	Correct treatment
40-user scope	Approved by D-031; must remain unchanged.
60-user suggestion	Proposed only; Mark explicitly says it is not approval.
2026-09-15	Planning target only; not an approved start date.
Security approval	Not granted; Priya owns the decision.
Timeout test	Tomas Weber, due 2026-09-07.
Dashboard/communication	Sarah Kim, due 2026-09-10, based on the named-owner chat correction.
One-change test	Only High defects changes from 2 to 1.

Facilitation questions

- Why is the chat correction valid for action ownership but insufficient to change D-031?
- What does sharing the Page expose, and what remains private?
- What is the difference between version recovery and formal approval history?
- When should the team choose a Page, Notebook, Loop workspace, Word document or SharePoint record?

Trainer control answers

Control	Expected answer
Authoritative decision	D-031 controls scope and entry conditions.
Most likely Copilot error	Promoting "sounds workable," 15 September or 60 users into a decision.
Sharing fact	Recipients can access the Page without access to the original Copilot chat.
Version fact	Earlier Page versions can be browsed and restored; that is not the same as approval.
Conversion fact	Create > Document prepares a Word draft; Create > PDF creates a snapshot.
Official record	The organization-defined Word/SharePoint/records system, after approval.

Availability note

Pages visibility, Copilot features, sharing controls and conversion options can differ by account, tenant and rollout. If Pages is unavailable, participants should record the capability gap, review the static example, and complete the source-ranking and release-control work without bypassing tenant policy.
